Activity 06 - Tourism Image Rescue: Detail, Removal, and AI Enhancement

Course: Mastering Adobe Lightroom for Photo Editing Course Code: TGS-2022015367 Alignment: K1, K2, K4, K5, A2, A3 Version: v12.0 | 19 August 2026

Scenario

A tourism team has a hazy, noisy image that needs a larger display version. There are distracting people and a sensor spot. The image is useful but borderline, so the editor must compare conventional and AI-assisted options, identify artefacts, and recommend whether it is fit for use.

Role cards

Role 1: Imaging specialist

Represent this stakeholder's legitimate needs, constraints, quality risks, and preferred outcome. Record decisions in observable production terms.

Role 2: Tourism art director

Represent this stakeholder's legitimate needs, constraints, quality risks, and preferred outcome. Record decisions in observable production terms.

Role 3: Authenticity reviewer

Represent this stakeholder's legitimate needs, constraints, quality risks, and preferred outcome. Record decisions in observable production terms.

Role 4: Output technician

Represent this stakeholder's legitimate needs, constraints, quality risks, and preferred outcome. Record decisions in observable production terms.

Role 5: Quality observer

Represent this stakeholder's legitimate needs, constraints, quality risks, and preferred outcome. Record decisions in observable production terms.

Scenario questions

1. Which enhancement created real value?
2. Where did AI invent or damage detail?
3. What is the correct order for denoise, upscale, mask, and final export?
4. When should the image be rejected despite technical improvement?
