# Activity 07 - Capstone: Northstar Retail Campaign Review and Delivery

Course: Mastering Adobe Lightroom for Photo Editing Course Code: TGS-2022015367 Alignment: K1-K6, A1-A4
Version: v12.0 | 19 August 2026

## Detailed Lightroom production workflow

### Before you begin

1. Work only on the supplied practice images or other images for which you have explicit permission.
2. Create an evidence/ folder and preserve the source files unchanged.
3. Open the current Lightroom interface available to you; menu names can vary slightly across desktop, web, mobile, and Classic.
4. Save a screenshot whenever the workflow asks you to prove a setting, comparison, mask, search, permission, or export result.

### Procedure

1. Translate the three destination briefs into crop, dimensions, colour space, file size, mood, and approval criteria.
2. Audit the supplied images for format, technical quality, storytelling role, copyright source, model/property consent, trademark risk, and location metadata.
3. Quarantine any asset with uncertain rights and request evidence instead of assuming permission.
4. Cull and organise the approved assets using flags, ratings, keywords, and a final-selects album.
5. Create a consistent global look using profile, tone, colour, crop, optics, and a reusable preset.
6. Adapt each image with local masks, retouching, and detail controls while preserving authenticity.
7. Create two review versions for the hero image and explain each against the brief and design principles.
8. Create a shared album with the minimum required access; configure comments, downloads, contributions, metadata, and location visibility deliberately.
9. Ask stakeholders to comment against the acceptance criteria and record the final decision owner.
10. Apply the approved revisions and re-run technical, visual, rights, privacy, and artefact checks.
11. Export separate web, social, and screen packages with destination-specific dimensions, sRGB where appropriate, naming, quality, metadata, and watermark settings.
12. Open exported files, verify counts and properties, then create a delivery manifest containing filename, version, destination, rights status, approver, and checksum/size evidence.
13. Archive originals, approved derivatives, edit history, brief, consent/licence evidence, review comments, and the manifest according to access and retention rules.
14. Present the decision trail: what changed, why it changed, who approved it, and what was delivered.

### Review with stakeholders

1. Present the before/after comparison and the evidence, not only the finished image.
2. Ask reviewers to respond against the brief and acceptance criteria.
3. Record the decision owner, requested change, approval status, and next action.
4. Retain rejected versions when they explain a material decision.

## Debrief questions

1. How did stakeholder consultation change the final set?
2. Which Lightroom capabilities were suitable or unsuitable for this campaign?
3. How did design principles drive the hero edit?
4. Which rights/privacy risk changed your workflow?
5. How can another editor reproduce and audit the delivery?
